

# FAT / SAT

## Digital Commissioning

# Preventing Rather Than Fixing

Too bad! Most operational problems with BESS battery cells appear right after go-live but actually existed before. They go unnoticed in today's fragmented commissioning processes.

Our FAT/SAT digital commissioning checks 100% of your plant's batteries to detect and fix anomalies before go-live.

## WHY CHOOSE OUR BATTERY DIAGNOSTICS SOLUTION?

### 100% Testing Depth

Every rack or module will be analyzed – without additional effort!

### Quick and Easy Results

Detailed analysis results within 24 hours.

### Seamless Data Exchange

Using already generated data files – in almost any file format, during load tests.

### Fix it While it's Cheap

Concrete and rapid recommendations for root cause analysis.

## Benefits for Operators and Owners

- Peace of Mind** Ensure full operational reliability.
- Cost Savings** Avoid expensive repairs and downtime.
- Efficiency** Streamline your commissioning process with our easy data sharing and rapid analysis.
- Risk Mitigation** Streamline commissioning with quick analysis.
- Enhanced Reliability** Ensure in-depth testing and verification.

Ensure safety and efficiency with pre-commissioning battery diagnostics and increase long-term reliability with continuous battery monitoring immediately after commissioning.
